Notify when new portlet is added
L. RE: Notify when new portlet is added
L. RE: Notify when new portlet is added

Hello,

All the layout page of my portal are customizable by the users ("Customizable" option is activated on the three columns of the Layout)

If a new portlet is added to one of the customizable zone by the site administrator, the added portlet will not be visible on the "custom page" of the user until they reset their customization to match the one define on the default page.

So, is there a built-in functionality to notify users when the default page has been modified, in order to ask them to reset their modification?

Thx for your help

**Plugin Installation**

**Overview**

Starting with version 4.3 of the Liferay Portal, the software has been released with a plugin architecture that allows for developers to quickly produce themes, portlets, and layouts that can be redistributed into different environments. In order to facilitate their use, Liferay also introduced a Plugin Installer Portlet.

**Downloading Plugins**

There are two ways to obtain .WAR files:

1. Download the .WAR from the Plugin Installer Portlet by clicking the download link.

**Table of Contents**
